PROFESSIONAL SUMMARY

Highly analytical and self-directed recent Computer Science graduate (2025) with proven expertise in AI model evaluation, prompt engineering, and rigorous data triangulation. Experienced in testing the boundaries of frontier AI models through complex, multi-step reasoning tasks and meticulous fact-checking. Possesses exceptional written precision and a strong ability to synthesize independent research from multiple sources into well-documented, highly accurate outputs. Thrives in remote, output-based environments that demand high accountability, attention to detail, and continuous iterative refinement.

CORE COMPETENCIES & SKILLS

- **AI Evaluation & Prompting:** Complex Q&A Development, Multi-Step Reasoning Scenarios, Model Stress-Testing, LLM Output Analysis (Google AI Pro).
- **Research & Analysis:** Rigorous Source Triangulation, Fact-Checking, Analytical Thinking, Citation & Documentation, Edge-Case Identification.
- **Operational Excellence:** Written Precision, Self-Direction & Reliability, Independent Project Management, Iterative Refinement.

PROFESSIONAL EXPERIENCE

AI Evaluation Specialist & Domain Expert (Contract)

Jan 2024 – Present

Outlier AI, TryRating, TELUS Digital — Remote

- **Q&A Development & Testing:** Designed and evaluated challenging, multi-step prompts requiring deep synthesis to test the logical and reasoning limits of advanced AI models across technical domains (Project Aether, Mech Circuit).
- **Source Triangulation & Fact-Checking:** Conducted in-depth, independent research to verify the accuracy of AI-generated responses, applying rigorous source triangulation to prevent model hallucinations and ensure outputs were completely accurate.
- **Documentation & Citation:** Authored meticulously detailed assessments of AI outputs, documenting the research process, providing verifiable citations, and clearly explaining the logical rationale behind every evaluation.
- **Iterative Refinement:** Analyzed test outcomes and adjusted the difficulty of adversarial prompts to continually challenge model capabilities, maintaining strict alignment with evolving project guidelines and reviewer input.
- **Self-Direction & Reliability:** Consistently met output-based quotas and high-quality standards in a fully autonomous, remote environment, demonstrating exceptional reliability and attention to detail.

Independent Technical Researcher & Developer

Jan 2024 – Present

Project: Personal-Branding-Engine

- **Analytical Problem Solving:** Conducted independent technical research to architect and deploy a comprehensive software infrastructure, synthesizing complex documentation from multiple technical sources (Docker, Supabase, Render).
- **Written Precision:** Drafted clear, structured technical documentation and version control commits (GitHub) to track logic, establish clear citations for code usage, and document system modifications.
- **Multi-Domain Synthesis:** Continuously evaluated and integrated cutting-edge development frameworks, mirroring the multi-step analytical reasoning required to solve open-ended problems.

Competitive Analytics & Rapid Research

2025 – 2026

Hackathons & Technical Assessments

- **Rapid Information Synthesis:** Applied intense analytical thinking to solve complex, novel challenges under strict time constraints during the Bharatiya Antariksh Hackathon (2025) and Innova Hack (2026).
- **Technical Rigor:** Passed stringent logical and algorithmic evaluation assessments on CodeSignal and Handshake AI, proving high-level critical thinking, research proficiency, and execution capabilities.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Graduated: April 2025

GIET University

- **Focus Areas:** Advanced Analytics, Data Structures, Technical Writing, and Computational Logic.
- **Continuous Upskilling:** Deepened analytical research methodologies and advanced technical frameworks via Newton School and Scaler (2025).
